

ALL SAINTS CATHOLIC CHURCH

Location: Cedar Rapids, IA

Project Type: Remodel/System Upgrade

Diversified Design Group Capacity: Audio and Control Systems/Project Planning & Coordination

Unique circumstances call for unique solutions. When presented with the opportunity to remodel/upgrade the audio system for All Saints Catholic Church, Diversified Design Group, Inc. came up with solutions that were unique and surpassed the goals of the Owner and Architect.

A combination of steerable line arrays, standard line arrays, custom low frequency cabinets and distributed overhead loudspeakers were used to provide intelligible, high quality sound reinforcement to all areas of the church. A multizone, electronically corrected speaker system provided the choir with monitoring capabilities even without a choir shell. An automatic mixer, superior wireless microphone systems and sequenced AC power rounded out the design.

The system provided All Saints Catholic Church with the versatility and audio quality that allowed them to present services with confidence, knowing the audio system was clear and trouble free.
